NEWS

SECURE YOUR DATA PROPERLY

Montreal, Qc | August 5th, 2016 – Prevent a future cyber-attack becomes more and more difficult. Indeed, more and more companies are major victims of cyber-attacks, affecting users and complete systems. Hackers are more imaginative and inventive and it becomes difficult to be a step forward to prevent their multiple attacks.

Would you like to be considerate? Would you like to be on the lookout for any ongoing attack? You would like to have a database of malicious software up to date and even more? We offer you an innovative and revolutionary solution that uses artificial intelligence and learning of your machines to monitor your systems. This solution is designed to work with a minimum of updates, less system resources and a limited impact on your network and your users. In addition, it is a solution that works in all environments of 1,000 users to more than 100,000 users.

Cylance, revolutionized cyber security, with products and services that prevent proactively, rather than detect reactively to advanced persistent threats and malware. Our technology is deployed on more than four million terminals and protects hundreds of enterprise customers worldwide, including Fortune 100 organizations and governmental institutions.

What is Cylance? It redefines what antivirus (AV) can and should do for your organization by taking advantage of artificial intelligence to detect and prevent malicious software to run on your environment and this in real time.

A mathematical approach for the identification of malicious software and using techniques of machine learning instead of signatures and reactive sandbox patent

pending, Cylance PROTECT makes malware, new viruses, bots and future unknown variants unnecessary.

Looking for a particular item?

Convinced that the next generation of terminals security is good for your organization? Contact a Groupe Access Cylance Protect expert to begin!

About GROUPE ACCESS

Groupe Access was founded in 1993 and has become one of the leading hardware, managed service and cloud services firms in Canada. Groupe Access provides end-to-end hardware, IT and business process services to clients across Canada.

À propos de Cylance

In the heart of unprecedented malware of Cylance, a display function is a revolutionary machine learning research platform that leverages the power of computational science and artificial intelligence. Analyse and classify the hundreds of thousands of characteristics by file, in order to discern whether an object is 'good' or 'bad' in real time to sort down to study their "DNA".
